<https://oz-orhun.github.io/>

PROFESSIONAL SUMMARY:

IT professional with 15+ years of hands-on experience in data analytics, helpdesk operations, application analysis, cybersecurity, and network infrastructure. Proven track record of building ITSM platforms from scratch, managing 14,000+ annual tickets via Power BI dashboards, and identifying critical vulnerabilities through custom-developed security tools. Experienced in supporting 1,200+ users across complex enterprise environments, communicating technical findings to executive leadership, and delivering solutions that eliminate costly vendor dependencies. Adept at translating data into actionable insights using SQL, Power BI, Python, and Tableau.

EDUCATION:

- Master of Science in Computer Science, Washington University of Virginia – Annandale, VA, GPA: 3.53/4.00
- Bachelor of Science in Software Engineering, Maltepe University – Istanbul, Turkey
- Bachelor of Business Administration, Anadolu University – Eskisehir, Turkey

CERTIFICATIONS & PROFESSIONAL RECOGNITION:

- CompTIA Security+ (Active)
- Microsoft Power BI & Power Automate — Applied Implementation Experience
- ITIL Foundations Principles — Applied in full courthouse infrastructure redesign (Istanbul Kartal Courthouse); formal certification obtainable upon request
- Published Research Presenter — National Academic Informatics Conference, 2013
- Young Entrepreneur Award — Istanbul Maltepe University

TECHNICAL SKILLS:

Analytics & BI: Power BI, Tableau, SQL, Python, Amazon Redshift, SQL Server, PostgreSQL, Oracle, MySQL, Microsoft Excel
Cybersecurity: Vulnerability Assessment, Penetration Testing, Wireshark (Packet Analysis), Incident Response, CompTIA Security+, Firewall Management, LDAP/AD Access Control

Helpdesk & ITSM: Custom ITSM Platform (Built from Scratch), Ticketing & SLA Management, End-User Training, ServiceNow (Familiar)

Network & Infra: TCP/IP, DNS, DHCP, VPN, LAN/WAN, OSI Model, Windows Server, Active Directory, Group Policy, Microsoft 365, Mac

Development: C#, .NET, Python, PHP, Web & Mobile App Development, Git, Power Automate,

LINQ Applications: Active Directory, CRM Systems, O365 Suite, UYAP, SEGBIS Secure Video (Cisco)

CORE COMPETENCIES:

Data Analytics & Reporting: Power BI & KPI Dashboards

Helpdesk & ITSM Management: SQL / Python / Tableau

Vulnerability Assessment: Active Directory & LDAP

Network & Infrastructure: TCP/IP, DNS, DHCP, VPN

Application Analysis: Windows OS Administration

PROFESSIONAL EXPERIENCE:

Ourisman, Alexandria, VA Aug 2025 - Jan 2026 Product Specialist (Technology Focus)

- Leveraged CRM systems and digital inventory platforms to manage customer engagement pipelines in a fast-paced, multicultural team environment.

Pita House, Alexandria, VA Aug 2022 - May 2024 IT Operations Analyst

- Provided hands-on IT support for POS systems, network infrastructure, and endpoints in a live business environment, ensuring continuous operations.
- Improved system reliability by 30% through preventive maintenance, documentation, and vendor coordination for hardware upgrades.

Ministry of Justice – Istanbul Regional Courthouse, Istanbul, Turkey Aug 2007 - Jan 2023 IT Team Lead / Systems Analyst

Data Analytics & Reporting

- Designed and managed a Power BI analytics platform processing 14,000+ annual helpdesk tickets — built interactive dashboards measuring technician performance, SLA compliance, and recurring incident trends, culminating in a 30- page annual IT department report delivered to executive leadership.
- Developed a Tableau-based reporting solution for Fairfax Public Schools and conducted Python-driven data analysis for university-level research, demonstrating cross-sector analytics versatility.
- Collected, compiled, and analyzed operational data across applications, networks, and user systems to surface chronic issues, identify bottlenecks, and recommend infrastructure improvements.

Helpdesk Operations & Client Support

- Built and deployed a full ITSM platform from scratch — including ticketing, inventory management, and custom reporting modules — currently still in active production use at two courthouse locations across Istanbul and Zonguldak.
- Managed all IT support channels (phone, email, in-person) for 1,200+ users ranging from judges and chief prosecutors to hardware vendors and security personnel; reduced walk-in and ad-hoc support requests by 99% through structured ticket workflows.
- Tracked all requests from initiation to resolution with detailed logs; specialized in escalated and chronic issues that tier-1 staff could not resolve, including undetected malware, cross-department data sharing failures, and custom software development requests.
- Coordinated with development and QA teams to communicate and resolve reported application issues; participated in User Acceptance Testing and managed issue tracking through full resolution cycles.

Vulnerability Assessment & Cybersecurity

- Identified and responsibly disclosed critical vulnerabilities in enterprise ERP and email systems using custom developed C# security tools — preventing potential data breaches in a high-security judicial environment. • Discovered an unauthorized privilege escalation vulnerability in LDAP, reported findings to security administrators, and coordinated rapid remediation.
- Detected an active malware outbreak that evaded enterprise antivirus by correlating similar complaints across departments via the ITSM platform — traced the infection vector to a USB source in the bar association computer room, extracted the malicious files, and submitted them to the antivirus vendor's signature team for same-day detection updates.
- Conducted penetration testing on internally developed web systems; reduced application error rate to near zero by building and maintaining the institution's official website with security-first design principles. • Used Wireshark for network packet analysis to detect suspicious traffic patterns and implement preventive countermeasures.

Network & Infrastructure Management

- Administered Windows Server environment including DNS, DHCP, FTP, IIS, and SQL Server — maintaining 99.9% uptime for mission-critical judicial systems across 2,000+ endpoints.
- Managed Active Directory, Group Policy, and VPN infrastructure; tracked and resolved recurring power and network outages via ITSM data, escalating chronic issues to leadership for permanent resolution.
- Supported Turkey's national secure video conferencing system (SEGBIS), ensuring encrypted and reliable remote court proceedings across multiple jurisdictions.

Application Development & Digital Transformation

- Pioneered the institution's first AI-powered legal research tool — reducing attorney research time by 60% with zero defects at launch — years before AI adoption became mainstream in government.
- Built and deployed web and mobile inventory management applications with barcode integration, eliminating manual tracking errors institution-wide.
- Delivered technical training programs to 300+ end users, achieving a 30% reduction in support ticket volume through proactive user enablement.
- Eliminated an \$85,000 annual external vendor contract by designing an internal ITSM platform using open-source technologies.
